

# Hydraulic cylinders

## Tie rod design

### Type CD70 / CG70

**RE 17016**

Edition: 2014-03

Replaces: 08.08

- ▶ Series 70
- ▶ Component series 1X
- ▶ Nominal pressure 70 bar [7 MPa]

### Features

- ▶ 16 types of mounting
- ▶ Piston Ø (**ØAL**) 25 ... 200 mm
- ▶ Piston rod Ø (**ØMM**) 12 ... 140 mm
- ▶ Stroke length up to 3 m

### Contents

Features	1
Ordering code: Series CD70	2, 3
Ordering code: Series CG70	4, 5
Position of the line connections	6
Technical data	7, 8
Project planning software ICS	8
Diameters, forces and areas	9
Overview types of mounting: Series CD70	10
Overview types of mounting: Series CG70	11
Dimensions CD70, CG70	12 ... 75
Enlarged line connection 13 and 14	76
Piston rod ends "E" and "F"	77
Mounting elements	78 ... 81
Admissible stroke lengths	82 ... 84
Kinking calculation	85
Support width extension	85
Installation lengths and position tolerances	86
Inductive proximity switch	87, 88
Seals (standard versions)	89
End position cushioning	89
Braking force calculation	90
Spare parts drawing	91
Weight	92

- 1) Not possible with piston  $\varnothing$  25 mm
- 2) Not possible with piston  $\varnothing$  200 mm
- 3) Trunnion position freely selectable.  
When ordering, always specify the "XV" dimension in the plain text in mm.  
With piston  $\varnothing$  25 mm, the trunnions are at the cylinder head.
- 4) Observe the admissible stroke length, page 82 to 84
- 5) Dimensions see page 76. Not possible with "K" type of mounting.
- 6) Not possible with "E" piston rod end
- 7) Not possible with piston rod  $\varnothing$  12 mm
- 8) All graphical representations in the data sheet show position 1
- 9) Always specify the attachment of inductive proximity switches or piston rod extension "LY" in the order in the plain text
- 10) Not possible with "M" type of mounting

**Order example:**

CD70B50/22-200Z1X/01HBDM1-1A

With special versions, an "X" will be inserted in the type key at the corresponding position and an SO number will be amended at the end.

18	Further details in the plain text <sup>8)</sup>	*

<sup>1)</sup> Not possible with piston  $\varnothing$  25 mm

<sup>2)</sup> Not possible with piston  $\varnothing$  200 mm

<sup>3)</sup> Trunnion position freely selectable.

When ordering, always specify the "XV" dimension in the plain text in mm.

With piston  $\varnothing$  25 mm, the trunnions are at the cylinder head.

<sup>4)</sup> Observe the admissible stroke length, page 82 to 84

<sup>5)</sup> Dimensions see page 76

<sup>6)</sup> Not possible with "E" piston rod end

<sup>7)</sup> Not possible with piston rod  $\varnothing$  12 mm

<sup>8)</sup> All graphical representations in the data sheet show position 1

<sup>9)</sup> Always specify the attachment of inductive proximity switches or piston rod extension "LY" in the order in the plain text

<sup>10)</sup> Not possible with "M" type of mounting

**Order example:**

CG70C50/22-200Z1X/01HBDM1-1A

With special versions, an "X" will be inserted in the type key at the corresponding position and an SO number will be amended at the end.

### Position of the line connections

By rotating the cylinder head and/or cylinder base, the position of the line connections can be varied during the assembly for most cylinder mounting types. The possibilities can be seen in the following table.

Throttle and check valve will also change their position accordingly.

With F, L, N and T types of mounting as well as at the cylinder base with G type of mounting, throttle and check valve are in position 1 when the line connection is rotated.

Types of mounting	Selectable position of the line connections															
	B	C	D	E	F	G	H	K	L	M	N	P	Q	R	S	T
at the cylinder head	1	1	1	1	1	1	1	1	1	-	1	1	1	1	1	1
	2	2	2	2	2	2	2	2	2	-	2	2	2	-	2	2
	3	3	3	3	-	3	3	3	-	3	-	3	3	3	3	-
	4	4	4	4	4	4	4	4	4	-	4	4	4	4	-	4
at the cylinder base	1	1	1	1	1	1	1	1	1	-	1	1	1	1	1	1
	2	2	2	2	2	2	2	2	2	-	2	2	2	2	-	2
	3	3	3	3	-	3	3	3	-	3	-	3	3	3	3	-
	4	4	4	4	4	4	4	4	4	-	4	4	4	4	4	-

-  = **Position 2 and 4 not possible with:**
- ▶ Piston Ø 25 to 100 mm with enlarged line connection, version 13 and 14
  - ▶ Piston Ø 25, 32/22 and 32/25 with line connection, version 01 and 02
  - ▶ Piston Ø 32/18, 40/25, 50/36 and 63/45 in each case with damping

-  = **Position 2 and 4 not possible with:**
- ▶ Piston Ø 25
  - ▶ Piston Ø 32 to 100 mm with enlarged line connection, version 13 and 14

-  = **Position 2 and 4 not possible with piston Ø 25**

-  = **Position 2 and 4 not possible with piston Ø 25 with enlarged line connection, version 13 and 14**

-  = **Position 2 and 4 not possible with:**
- ▶ Piston Ø 25 to 200 mm with enlarged line connection, version 13 and 14
  - ▶ Piston Ø 25, 32 and 40 with line connection, version 01 and 02
  - ▶ Piston Ø 50/36 and 63/45 with damping

-  = **Position 2 and 4 not possible with:**
- ▶ Piston Ø 25 to 63 mm with enlarged line connection, version 13 and 14

**Technical data**

(For applications outside these parameters, please consult us!)

<b>general</b>		
Weight	kg	See page 92
Installation position		Any
Ambient temperature range	°C	-20 ... +80
Primer coat <sup>1)</sup>	µm	Min. 40

<b>hydraulic</b>		
Nominal pressure	bar [MPa]	70 [7]
Maximum operating pressure <sup>2)</sup> (depending on piston Ø and type of mounting)	bar [MPa]	105 [10.5]
Minimum operating pressure <sup>3)</sup> (without load)	bar [MPa]	10 [1]
Static test pressure (depending on piston Ø and type of mounting)	bar [MPa]	Admissible operating pressure x 1.3
Hydraulic fluid		See table below
Hydraulic fluid temperature range	°C	-20 ... +80
Viscosity range	mm <sup>2</sup> /s	12 ... 380 (preferably 20 ... 100)
Maximum admissible degree of contamination of the hydraulic fluid - cleanliness class according to ISO 4406 (c)		Class 20/18/15 <sup>4)</sup>
Stroke speed (depending on line connection)	m/s	0.5
Bleeding		By default
Tolerances see page 86		

<b>Hydraulic fluid</b>	<b>Classification</b>	<b>Suitable sealing materials</b>	<b>Standards</b>
Mineral oils	HL, HLP	NBR, FKM	DIN 51524
Phosphate ester	HFDR	FKM	ISO 12922

<sup>1)</sup> By default, hydraulic cylinders are primed with a coating (color gentian blue RAL 5010) of min. 40 µm. Other colors upon request. With hydraulic cylinders and attachment parts, the following areas are not primed or coated:

- ▶ All fit diameters to the customer side
- ▶ Sealing surfaces for line connection
- ▶ Sealing surfaces for flange connection
- ▶ Inductive proximity switches

The areas that are not painted are protected by means of a solvent-free corrosion protection agent.

<sup>2)</sup> If there are extreme loads, such as high sequence cycles, the mounting elements and threaded piston rod connections must be checked for the application.

<sup>3)</sup> A minimum operating pressure is required in order to guarantee good functioning of the hydraulic cylinder. Without load, a minimum pressure of 10 bar is recommended for differential cylinders; for lower pressures as well as double-acting cylinders, please contact us.

<sup>4)</sup> The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components. For the selection of the filters see [www.boschrexroth.com/filter](http://www.boschrexroth.com/filter).

## Technical data

(For applications outside these parameters, please consult us!)

### Life cycle:

Rexroth hydraulic cylinders correspond to the reliability recommendations for industrial applications.  
 ≥ 10000000 double strokes in idle continuous operation or 3000 km piston travel at 70 % of the nominal pressure, without load on the piston rod, with a maximum velocity of 0.5 m/s, with a failure rate of less than 5 %.

### Notice!

#### Boundary and application conditions:

- ▶ The mechanical alignment of the movement axis and thus the mounting points of hydraulic cylinder and piston rod must be ensured. Lateral forces on the guides of piston rod and piston are to be avoided. It may be necessary to consider the own weight of the hydraulic cylinder (types of mounting: B, G, R, E or S) or the piston rod.
- ▶ The admissible stroke length/kinking load of the piston rod and/or the hydraulic cylinder must be observed (see page 82 to 85).
- ▶ The maximum admissible operating pressure must be complied with in any operating state of the hydraulic cylinder. Possible pressure intensification resulting from the ratio of annulus area to piston area and possible throttling points are to be observed.
- ▶ Detrimental environmental influences, like e.g. aggressive finest particles, vapors, high temperatures, etc. as well as contaminations and deterioration of the hydraulic fluid are to be avoided.

#### Standards:

Rexroth standard; the line connection threads are optionally designed as pipe thread according to ISO 228/1 or as metric ISO thread.

#### Acceptance:

Every hydraulic cylinder is tested according to Rexroth standard and complying with ISO 10100: 2001.

#### Safety instructions:

For assembly, commissioning and maintenance of hydraulic cylinders, observe the operating instructions 07100-B! Service and repair works have to be performed by Bosch Rexroth AG or by personnel especially trained for this purpose. In case of damage as a consequence of assembly, maintenance or repair work not performed by Bosch Rexroth AG, the warranty claim will be forfeited.

#### Check lists for hydraulic cylinders:

Hydraulic cylinders the characteristics and/or application parameters of which deviate from the values specified in the data sheet can only be offered as special version upon request. For offers, the deviations of the characteristics and/or application parameters must be described in the check lists for hydraulic cylinders (07200).

**This list does not claim to be complete. In case of questions regarding the compatibility with media or exceedance of the boundary or application conditions, please contact us.**

## Project planning software ICS (Interactive Catalog System)

The ICS (Interactive Catalog System) is a selection and project planning aid for hydraulic cylinders. The ICS allows designers for machines and systems to quickly and reliably find the perfect hydraulic cylinder solution through logic-guided type code enquiries. This software helps to solve design and project planning tasks more quickly and

efficiently. After having been guided through the product selection, the user quickly and reliably gets the exact technical data of the selected component as well as 2D and 3D CAD data in the correct file format for all common CAD systems.

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

1) Raised cylinder head and base

2) Raised cylinder head except for Ø 32/18 with end position cushioning "U" or "K"

3) Raised cylinder head for: Ø 40/25; Ø 50/36 and Ø 63/45 with end position cushioning "D" or "S"

4) ØD1 max. 0.5 mm deep

5) Adjustable throttle valve for the end position cushioning

6) Check valve and bleeding

7) Lubricating nipple, cone head form A according to DIN 71412

**Dimensions:** Type of mounting B

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

1) Raised cylinder head and base

2) Raised cylinder head except for Ø 32/18 with end position cushioning "U" or "K"

3) Raised cylinder head for: Ø 40/25; Ø 50/36 and Ø 63/45 with end position cushioning "D" or "S"

4) ØD1 max. 0.5 mm deep

5) Adjustable throttle valve for the end position cushioning

6) Check valve and bleeding

**Dimensions:** Type of mounting D  
(dimensions in mm)

**Piston Ø 80 ... 200 mm**

ØAL = Piston Ø

ØMM = Piston rod Ø

X\* = Stroke length

1) Raised cylinder head and base

2) Raised cylinder head except for Ø 32/18 with end position cushioning "U" or "K"

3) Raised cylinder head for: Ø 40/25; Ø 50/36 and Ø 63/45 with end position cushioning "D" or "S"

4) ØD1 max. 0.5 mm deep

5) Adjustable throttle valve for the end position cushioning

6) Check valve and bleeding

7) Except for piston rod end "E" with double-acting cylinders

8) Only with piston rod end "E" with double-acting cylinders

9) Trunnion position freely selectable.

When ordering, always specify the "XV" dimension in the plain text in mm. With piston Ø 25, the trunnions are at the cylinder head

10) Always specify the piston rod extension "LY" in the order in the plain text

**Dimensions:** Type of mounting E  
(dimensions in mm)

Piston Ø 80 ... 200 mm

**Notice!**

ØAL = Piston Ø  
ØMM = Piston rod Ø

$$s_K = l$$

## Kinking calculation

The kinking calculation is usually performed according to Euler as the piston rods are in most cases to be regarded as slim rods.

$$\text{Kinking load } K = \frac{\pi^2 \cdot E \cdot J}{s_K^2} \text{ in N}$$

i.e. with this load, the rod kinks!

$$\text{Maximum operating load } F = \frac{K}{S} \text{ in N}$$

$s_K$  = Free kinking length in mm

$E$  = Module of elasticity in N/mm<sup>2</sup> = 2.1 • 10<sup>5</sup> for steel

$J$  = Moment of inertia in mm<sup>4</sup> for circular cross-section

$$= \frac{d^4 \cdot \pi}{64} = 0.0491 \cdot d^4$$

$S$  = Safety (3.5)

## Support width extension

With long strokes and pressure load, a support width extension is recommended in order to reduce the bearing load with extended piston rod. With this extension,

a spacer sleeve (3) is inserted between piston (1) and cylinder head (2). This spacer sleeve extends the lever arm and thus reduces the bearing load.

**Without support width extension**

**With support width extension**

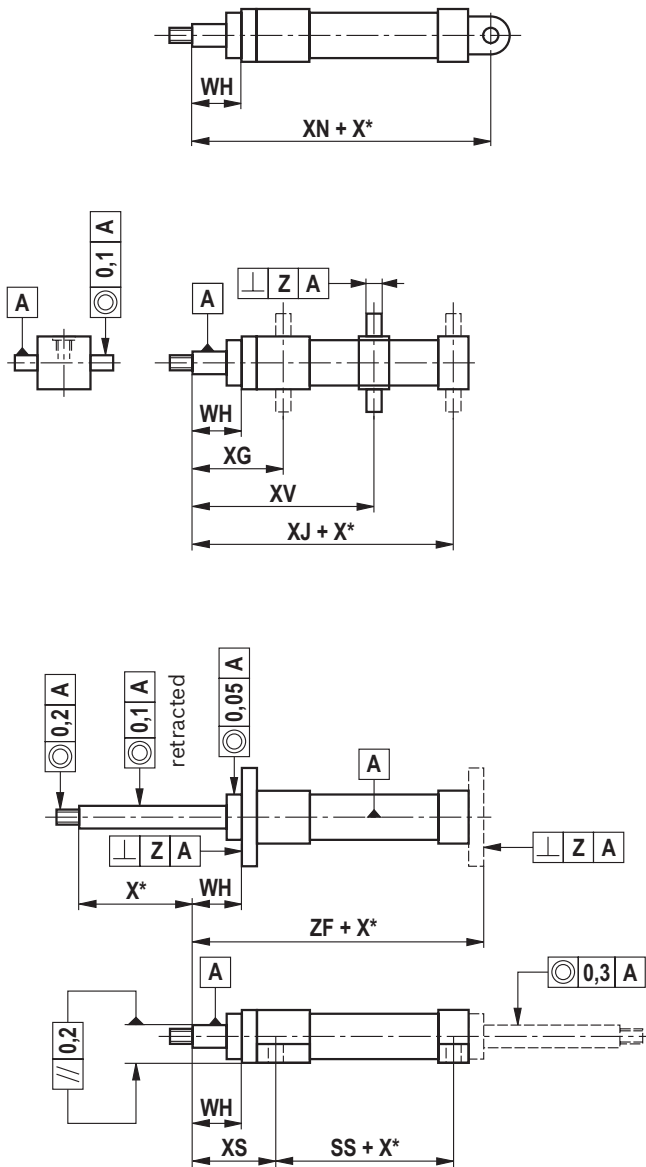

Type of mounting	Ordering code for support width extension in mm for all piston Ø							
	-	25	50	75	100	125	150	175
	Stroke length in mm							
B, G, S	up to 500	501 to 625	626 to 750	751 to 875	876 to 1000	1001 to 1125	1126 to 1250	1251 to 3000

### Notice!

- ▶ Installation position: 180° opposite to the line connections
- ▶ Line connection: Enlarged line connections are only possible after consultation

- ▶ Type of mounting: With F, L, M, N and T types of mounting, the installation 180° opposite to the line connection is not possible
- ▶ Types of mounting and unit dimensions, see page 12 to 75

## Proximity switch

Inductive proximity switches are used as reliable end position control for hydraulic cylinders. They are an important element for the safe and exact monitoring of safety equipment, locks and/or other machine functions in their end position by means of the output of signals. The proximity switch which is high-pressure resistant up to 500 bar

works in a contactless manner. Thus, it is wear-free. The proximity switch has been set at the factory. The switching distance must not be adjusted. The lock nut of the proximity switch is marked at the factory using sealing wax. On versions with proximity switch, the hydraulic cylinders are equipped with proximity switches.

## Technical data

(For applications outside these parameters, please consult us!)

Function type		PNP normally open contact
Admissible pressure	bar	500
Operating voltage	V DC	10 ... 30
	Including residual ripple	%
		≤ 15
Voltage drop	V	≤ 1.5
Rated operating voltage	V DC	24
Rated operating current	mA	200
Idle current	mA	≤ 8
Residual current	μA	≤ 10
Repetition accuracy	%	≤ 5
Hysteresis	%	≤ 15
Ambient temperature range	°C	-25 ... +80
Temperature drift	%	≤ 10
Switching frequency	Hz	1000
Protection class	Active area	IP 68
	Proximity switch	IP 67
Housing material		Material no. 1.4104

## Pin assignment

## Seals (standard versions)

### Piston rod sealing

Design with piston  $\varnothing$  32/25  
Design with piston rod  $\varnothing$  50, 63 and 80 mm

### Piston sealing

**Version "A"**  
Lip rings for leakage oil-free operation under static conditions

**Version "T"**  
Sliding ring for low-friction operation

## End position cushioning

### End position cushioning at the cylinder base.

The piston (1) is screwed directly to the piston rod, the damping bush (2) by means of a threaded bushing (3). By retracting the conical damping bush into the bore of the cylinder base (4), the cross-section for the liquid discharged from the piston chamber (5) is reduced until it equals zero. The liquid from the piston chamber (5) can only be discharged via the bore (6) and the adjustable throttle valve (7). At the throttle valve (7), the damping effect is regulated. The smaller the flow cross-section, the larger the effect of the end position cushioning.

### Adjustable throttle valve for the end position cushioning

The throttle valve version prevents the throttle bolt (8) from being screwed out when the end position cushioning is adjusted.

The set end position cushioning is secured by the lock nut (9).

### Check valve with bleed screw

The check valve (10) serves as extension aid from the end position. In this way, the throttling point is evaded during the extension. The hydraulic cylinder is bled via the bleed screw (11).

In hydraulic cylinders without end position cushioning, this bleed screw is fitted by default.

Throttle valve and check valve are designed as installation kits and can be interchanged.

## Braking force calculation

The end position cushioning must ensure controlled deceleration (braking) of the stroke velocity in both end positions.

In this connection, all effective energies must not exceed the maximum damping capacity.

In the damping which works according to the fluid flow throttling principle the energy to be braked is converted into heat.

### Braking force calculation

The braking force of a hydraulic cylinder in case of horizontal installation is calculated as follows:

Extension movement:

$$F_B = m \cdot a + A_K \cdot p$$

Retraction movement:

$$F_B = m \cdot a + A_R \cdot p$$

$v$  = Stroke velocity in m/s

$s$  = Damping length in m

$A_K$  = Piston area in cm<sup>2</sup>

$A_R$  = Annulus area in cm<sup>2</sup>

$p$  = System pressure in N/cm<sup>2</sup>

$F_B$  = Braking force in N

$m$  = Moved weight in kg

$a$  = Deceleration in m/s<sup>2</sup>

$$a = \frac{v^2}{2 \cdot s}$$

$$1 \text{ bar} \sim 10 \text{ N/cm}^2$$

With vertical stroke movements of the hydraulic cylinder, you must add or subtract the weight (consisting of load, piston and piston rod) to or from the braking force  $F_B$  according to the movement direction.

In this calculation, the cylinder's own friction has been neglected.

### Calculation of the average damping pressure

Normally, the nominal pressure of the hydraulic cylinder must not be exceeded by the average damping pressure.

$$p_D = \frac{F_B}{A_D}$$

$p_D$  = Average damping pressure in N/cm<sup>2</sup>

$F_B$  = Braking force in N

$A_D$  = Effective damping area in cm<sup>2</sup>

$$1 \text{ bar} \sim 10 \text{ N/cm}^2$$

If the calculation results in an excessive value, the damping length has to be enlarged or the system pressure reduced.

### Spare parts drawing

### Throttle and check valve in cylinder head and cylinder base

### Ordering spare parts:

- ▶ For individual components, specify the denomination and item no. from the spare parts drawing with complete type designation of the hydraulic cylinder.
- ▶ For seal kits, specify the complete type designation of the hydraulic cylinder.
