## Pressure Switch <br> Modular Valve

## 50l/min <br> 25MPa

## Features

(1)This modular valve detects pressure changes inside the hydraulic circuit and opens and closes an electrical circuit accordingly.
(2)High precision detection, high precision circuit control, outstanding reli-
ability.
(3) Maximum operating pressure: 25 MPa \{255kgf/cm²\}
(4) Indicator light built into the DIN connector shows operational status at a glance.
(5) A double type is also available for control of both port A and port B in a compact configuration.

- Handling

1 See the detailed explanation on the next page for information about wiring inside connectors.
2)Contacts are normally open type only, not normally closed type.
3 In addition to load wiring, power supply wiring is also required to illuminate the indicator light. See the wiring diagram for more information.
4 If the DIN connector interferes with other valves, remove the two switch installation bolts and change the installation orientation.
If interference is caused in all orientations, install an interference blanker plate on top of the connector.
Contact your agent if an interference blanker plate is required.
5 Note that a special type of DIN connector is required. The DIN connector is not interchangeable with the one for the SA type solenoid valve.
6 If you cannot remove the DIN connector when wiring, remove the switch installation bolts and then remove the DIN connector. The tightening torque for the installation bolts is 5 to 7 Nm $\{51$ to $71 \mathrm{kgf} / \mathrm{cm}\}$.
7 This valve has drain volume the same as the OG-GO1 (decompression valve) the port for detecting structural pressure.
8 Do not include inductive components or capacitive components in the loaded circuit that connects to the valves because they significantly reduce the life of the micro-switches. Contact us for details.

Note) 1. The DIN connector wiring connector port size is PG11.
2. The compatible cable diameter for the DIN connector is $\phi 8$ to $\phi 10$. Dust resistance and water resistance is lost for any cable outside this range.
3. The connector can be installed in different orientations are 90 -degree increments by changing the orientation of the terminal block.
4. The connector is designed so the cover cannot be removed unless the installation screws are removed.
5. Use M3 for round type and $Y$ type solderless terminals.

6 . The tightening torque of M3 screws used for securing connectors and for terminals is 0.3 to 0.5 Nm .

## Installation Dimension Drawings

Note) Pressure is increased by clockwise (rightward) rotation of the adjusting screw, and decreased by counterclockwise (leftward) rotation.
